J. Khabbazi, R. Li, V. Chou, and J. Quinn, “On the Analysis of Mixing Homogeneity of Hydrogen and Methane in Pipelines,” to be submitted to Applied Thermal Engineering, by Jul 2023.</p>
PRESENTATIONS	<p>[1] A. Khabbazi, R. Li, and J. Quinn, “Green Hydrogen Supply to Urban Infrastructure and Buildings through Blending into the Existing Grid,” in Proceedings of the Canadian Society for Mechanical Engineering International Congress, 2022, pp. 1–1., (Link).</p> <p>[2] A. Khabbazi, R. Li, J. Quinn, and M. Hoorfar, “The Blending and Transmission of Hydrogen and Natural Gas in Transmission and Distribution Pipelines,” in Proceedings of the 13th International Green Energy Conference, 2021, pp. 1–1., (Link).</p>
RESEARCH EXPERIENCE	<p>Graduate research assistant at the School of Engineering, Jul 2021 – Present UBC, Supervisor: Prof. Sunny Ri Li</p> <ul style="list-style-type: none">▪ Summary: A numerical and analytical study on blending 5-20%mol hydrogen via Tee junctions into the existing natural gas pipeline infrastructure within BC to reduce GHG emissions is conducted. Multi-species ideal/real gas equations of state (EoS) and mixing/combining rules are developed separately via C and compiled into ANSYS Fluent. The impacts of the momentum ratio of two streams, turbulent diffusion, and buoyancy forces on the possible stratification within the pipelines are investigated. Different cases are proposed and studied to achieve an immediate homogeneous mixture following the hydrogen injection, (+more). <p>Undergrad research assistant at the Department of Mechanical Engineering, Dec 2019 – May 2020 UofTabriz, Supervisor: Prof. Seyed Mohammad Seyed Mahmoudi</p> <ul style="list-style-type: none">▪ Summary: Comparing the efficiency of Kalina cycle system 11 (KCS11) and Kalina cycle system 111 (KCS111) based on different decision variables. The results were compared with some benchmarks in the literature. From a thermodynamics perspective, and apart from KCS111’s complex configuration and high costs, it is more efficient than the base cycle, KCS11, (+more).
HONORS & AWARDS	<ul style="list-style-type: none">▪ Best Presentation Award at CSME 2022 International Congress, (Certificate) CSME, 2022

	<ul style="list-style-type: none"> Graduate Research Scholarship, 3,000 CAD UBC, 2022 Graduate Dean's Entrance Scholarship, 5,000 CAD UBC, 2021 Fully-funded graduate student in Mechanical Engineering, 26,000 CAD/year UBC, 2021 Merit-based admission to M.Sc. studies from distinguished universities in Iran, including, Sharif University of Technology, University of Tehran, and University of Tabriz BSc, 2020 2nd place among 124 B.Sc. students of Mechanical Engineering, class 2016 entry BSc, 2020
TEACHING EXPERIENCE	<ul style="list-style-type: none"> APSC172 Engineering Analysis I, Role: Tutorial instructor, MASc Fall'21, Fall'22 ENGR385 Heat Transfer Applications, Role: Lab instructor, MASc Winter'22, Winter'23 ENGR310 Fluid Mechanics II, Role: Lab instructor, MASc Fall'21 Thermodynamics II, Role: Course support, BSc Winter'20 Computer Programming (C/C++), Role: Head tutorial instructor, BSc Fall'18, Winter'19, Fall'19
TEST SCORE	<ul style="list-style-type: none"> TOEFL: 107/120 (W 28/30, S 24/30, R 28/30, L 27/30), obtained in 2020. GRE: Q 166/170, W 4/6, V 147/170, obtained in 2020.
SKILLS	<ul style="list-style-type: none"> Technical Software: ANSYS Fluent, OpenFOAM, Fluent Meshing, Tecplot, Paraview, Gmsh, CATIA Programming: Python, C/C++, Matlab, EES, HTML, Git Frameworks: NumPy, Pandas, SKlearn, SciPy, Matplotlib, Seaborn, TensorFlow System and computation: Linux, High Performance Computing (HPC)
SELECTED COURSES	<ul style="list-style-type: none"> Thermofluids (all A+) <ul style="list-style-type: none"> Multiphase Flows Topics in Engineering - H2NG TRANS * Heat Transfer I Fluid Mechanics I&II Thermodynamics I&II Refrigeration Systems Power Plants Turbulence (Winter 2023) Numerical Analysis (all A+) <ul style="list-style-type: none"> Computational Fluid Dynamics (CFD) Fundamentals of CFD Numerical Computations Computers and Systems (all A+) <ul style="list-style-type: none"> Applied Machine Learning Deep and Reinforcement Learning (Winter 2023)
COURSE PROJECT	<p>MASc:</p> <ul style="list-style-type: none"> H2NG TRANS: Developing a novel code via C language, compilable to ANSYS Fluent through Linux and Windows, for Soave-Redlich-Kwong (SRK) Equation of state (EoS) included with Van der Waals linear mixing/combining rules for multi-species mixtures. An advanced version was developed and applied to the MASc thesis later on. (sample codes) CFD: Carrying out several Python-based mini-projects such as Wave-convection-inviscid-medium and 2D-flow-square-duct as well as OpenFOAM-based ones, including 2D-lid-driven-cavity-flow, Turbulent-flow-backwards-facing-step, Converging-diverging-nozzle, etc. (codes and results) Multi-phase Flows: Studying the linear instability of 2-D inviscid liquid sheets through the representation of results in Matlab. The derivation of dispersion relation for both anti-symmetrical and axi-symmetrical disturbances was carried out, and the instability limits and instability growth rate was also studied.

*Mainly covered advanced thermodynamics topics, e.g., mixing/combining rules, advanced equations of state, etc. The relevant course project is described in the Course Project section.

- *Applied Machine Learning:*
An ML model was trained, which takes images of Lego pieces on a conveyor belt and classifies them into three different labels. For the stage 1, Lego pieces were ideal without orientation. The images were pre-processed through cropping, gray scaling, and resizing, and a maximum of 64*64 inputs were taken. The final accuracy was 94%. In the stage 2, the pieces were off-centered and oriented in different directions. Through feature engineering, different image-processing techniques in PIL and OpenCV such as edge detection was implemented, and an accuracy of 80% was achieved.
([codes and results](#))

BSc:

- *Heat Transfer I:*
Simulation of convection and conduction heat transfer in a section of co/counter-current double pipe heat exchanger with periodic BCs
, via ANSYS Fluent and ANSYS Meshing.
- *Fundamentals of CFD:*
Steady-state 2-D and 3-D simulation of flow across a fin with different boundary conditions
, via ANSYS Fluent and Gambit.
- *Mechanical Parts Design I:*
Design, simulation, and fabrication of an electromechanical lift
, via CATIA, C++, ANSYS Mechanical.
- *Refrigeration Systems:*
Pinch point analysis of several zeotropic refrigerants
, via ANSYS Fluent and Matlab NIST REFPROP Database.
- *Design of Mechanisms:*
Simulation and analysis of a 4-DoF mechanism in a space telescope base
, via EES and Adams software.

Coursera:

- *Machine Learning, (Certificate)*
Deep learning.AI, in 33 hours
- *Introduction to Data Science in Python, (Certificate)*
University of Michigan, in 31 hours
- *Applied Plotting & Data Representation in Python, (Certificate)*
University of Michigan, in 21 hours, ([codes and results](#))
- *Python Data Structures, (Certificate)*
University of Michigan, in 19 hours
